## Bellingcat's Digital Toolkit

Open Source Verification and Investigation Tools and Methods

Welcome to Bellingcat's openly and freely available digital list of tools and methods we use for verification and open source research. You can follow our work on our [website](#), [Twitter](#) and [Facebook](#). **Feel free to suggest tools not yet listed here!** This is version 3.3 (March 26, 2018).

A condensed version of the digital toolkit accessible for anyone with an internet connection, made by H I Sutton, Aliaume Leroy, and Tony Roper. Download [here](#) in higher resolution.

The list includes satellite and mapping services, tools for verifying photos and videos, websites to archive hyperlinks, and much more. The list is long, and may seem daunting. There are guides at the end of the document, highlighting the methods and use of these tools in further detail. We also provide tailored digital forensics workshops.

Currently, I'm trying to find a better way to thematically structure this list and I'm working on a more extensive guide with simple case-studies to the tools we use most. This will be an openly available and digital guide in English and hopefully Arabic too. I will share a link here once it is published. Feel free to contact me with questions or suggestions via email ([christiaantrieb@bellingcat.com](mailto:christiaantrieb@bellingcat.com)) or Twitter ([@trbrtc](https://twitter.com/trbrtc)).

Maps, Satellites & Streetview

Paint.net

Namechk.com

Very good for identifying online accounts with a username. Simply plug the username in and this tool will identify where there are users using that name.

[a] is anyone able to tell me how confidently we can use this? not able to find a lot of info from the developers. would appreciate a chat with someone familiar with it

[b] maybe borrow from this table for this section which covers a lot of this same ground

[c] I think someone needs to dedup some of these entries

[d] Good one, will anyway clean up this specific list. Thanks!
